IT exam study guide / simulations

Exam : **NS0-592**

Title : NetApp Certified Support
Engineer, ONTAP Specialist

Vendor : Network Appliance

Version : DEMO

NO.1 End users are complaining of high latency when accessing an ONTAP 9 luster.

Which command helps you to determine whether there is a storage component that is contributing to this problem?

- A. `sysstat -c 30 -M 1`
- B. `wafldtop show -v -cpu -l 10 -c 5-n 6`
- C. `qos statistics latency show`
- D. `qos statistics performance show`

Answer: D

NO.2 A customer is attempting to move from NFSv3 to NFSv4.x and reports that all attempts to mount using NFSv3 continue to be successful, however, all of their NFSv4.x mount attempts fail with an "access denied" error.

Which two statements would cause this error? (Choose two.)

- A. The NFS server does not have NFSv4 enabled.
- B. The SVM's root volume allows execute access for all users.
- C. The export policy applied to the SVM's root volume does not allow the NFSv4 clients to access it.
- D. The export policy applied to the data volume does not allow clients to access it using NFSv4.

Answer: B,D

NO.3 You are investigating a CIFS issue at a customer site, but it is unclear which SMB version is being used between the client and the server. The customer has provided you with a packet trace output.

In this scenario, which packet exchange contains information to indicate which SMB version was agreed upon by the client and the server?

- A. Negotiate Protocol Request/Negotiate Protocol Response
- B. Session Setup Request/Session Setup Response
- C. Ioctl1 Request/FSCTL_DFS_GET_REFERRALS/Ioctl1 Response/FSCTL_DFS_GET_REFERRALS
- D. Tree Connect Request/Tree Connect Request Response

Answer: D

NO.4 A customer called you after a failure in their Microsoft Hyper-V environment on the "SVM1" SVM. The customer wants to enable nondisruptive operations (NDO) to prevent future failures.

In this scenario, which two actions must be performed? (Choose two.)

- A. Verify that the branchcache option is set on the CIFS share.
- B. Verify that SMB2 is enabled.
- C. Verify that SMB3 is enabled.
- D. Verify that the continuously-available option is set on the CIFS share.

Answer: B,D

NO.5 A customer mentions that their intercluster SnapMirror replication operations consistently take much longer than normal. While troubleshooting, you want to initiate a test SnapMirror session to collect performance data.

How would you accomplish this task?

- A. View the active network connections to the node to see if there a large number of active

connections.

- B.** Use the ifstat command to collect network performance data for the physical interface.
- C.** Run the network statistics lif show command for the intercluster LIF to simulate a network connection.
- D.** Run the network test-path command to simulate a SnapMirror connection and record the latency/throughput data.

Answer: D
